

K부터 출발해 모든 노드가 신호를 받을 수 있는 시간을 계산하라. 불가능할 경우 -1을 리턴한다. 입력값 (u, v, w)는 각각 출발지, 도착지, 소요시간으로 구성되며, 전체 노드의 개수는 N으로 입력받는다.

Input: times = [[2,1,1],[2,3,1],[3,4,1]], n = 4, k = 2

Output: 2
